

Postdoc pharmacology/neuroinflammation

The Max Planck Institute for Heart and Lung Research in Bad Nauheim nearby Frankfurt am Main is looking for a postdoctoral researcher in the field of inflammatory diseases. The position will be available as of February 1st, 2018.

We seek an enthusiastic, highly motivated Postdoc to join our research group working on G-protein-mediated signaling in immune cells. The project focuses on the molecular mechanisms contributing to inflammatory processes in the nervous system, with a focus on multiple sclerosis. The project will involve the generation and analysis of constitutive and conditional mouse mutants, *in vitro* and *in vivo* pharmacology, histology, molecular biology, protein biochemistry, and flow cytometry. Skills in molecular biology, cell biology and analytical FACS are required; experience with murine experimental autoimmune encephalomyelitis and cell sorting would be highly appreciated.

Salaries will be based on previous experience according to TVöD guidelines. Handicapped applicants with equal qualifications will be given preferential treatment.

Applicants should send a statement of interest, a full CV including certificates, and the names and addresses of two references to the address below or by email to
